Submitting for Multiple Providers

Recovery support files can contain data for more than one provider per file. SAMHIS backend processing engines associate data in the file to the provider ID specified on every row in the file.

Processing Rules

A change that will affect all types of rows is a new validation that will only allow services that are contained within the open billing fiscal year. Prior year records or records submitted early will be rejected. The validation rule for records submitted early will be effective every month and not just the last month of the fiscal year.

Key Fields

When processing data the following fields are used to match new data with previously loaded data.

- Provider Id
- Record No

The only way to change a key field is to send a Delete record and then an Add record.

Add

The only change to the processing of Add rows is the previously mentioned validation where service date must be contained within the open billing fiscal year.

Delete

When a Recovery Support Delete record is submitted it must match an existing row of data in SAMHIS. If a matching record is not found the row will error out and the only course of action will be to cancel the row and resubmit.

For Delete records that match existing data the previously submitted data will not be deleted, but instead a reversing transaction will be inserted into the database for the open billing month.

Change

When a Change record is submitted, it must match an existing row of data in SAMHIS. If a matching record is not found the row will error out and the only course of action will be to cancel the row and resubmit the data.

Change records will only process changes to the following fields:

(All other field in the record will be ignored, but must be present in the file for validation purposes.)

Key fields cannot be modified.

- client id
- first name
- last name
- middle name
- date of birth
- gender
- veteran status*
- ssn
- race

- ethnicity
- living arrangement*
- employment*
- enrolled in education*
- recovery capital score*

** These fields should only be changed if the data was wrong for the given date of service. If the data is updated after the date of service, old records should reflect the old value and new records when submitted should reflect the new value(s). If it is found the old value was incorrect for the give service date then update the records.*

CSV File Generation Guidelines

1. All files should be submitted without a header row.
2. It is recommended that fields **NOT** contain extra spaces for padding. For example, if a field allows 11 digits but the code values only use 3 digits then 3 digits is an acceptable width for the field. Adding the spaces only increases the size of the file and slows down uploading and processing of files.
3. Non-required fields must either be blank or contain a valid value.
4. Commas are not allowed within the data in any field. (Commas are column delimiters.)
5. Do not use quotes in any fields.
6. Do not insert blank lines between rows.

Column Specs

The following table lists the fields and all rules associated with those fields.

NOTE: No blanks fields are allowed in the file except where specified in the note field.

Field #	Field name	Codes/Allowed Values	Format	Notes
1	Unique Recovery Support Event ID	alphanumeric values. Must uniquely identify the service for the client and	string(50)	Key field - Must uniquely identify the service for the provider across all clients at the provider.
2	System Transaction Type Code	A - Add D - Delete C - Change	string(1)	Add is for adding new rows. Delete is for removing rows from SAMHIS. Submit a delete row in conjunction with an Add row to fix a key field that has changed. Change is for updating an existing row with new updated information for an existing admission. Update cannot be used to fix a key field change. For Add and Change system transaction type codes all fields must be supplied with valid data in each field. Only difference will be that a change record will error out if an existing admission record is not already found. Change records should be sent anytime one of the data elements in the spec are modified or when needing to change a baseline (T1 or T2) or discharge value for a NOM data element. For Delete records all the key fields must be supplied. The rest of the fields can be filled-in or left blank. Remember that every row must have the correct number of commas.
