Zero Suicide Utah: Can Suicide Be A Never Event?

Kim Myers, MSW
Utah Suicide Prevention Coordinator

Division of Substance Abuse and Mental Health
AGENDA

- Introductions
- Intro to Zero Suicide Model
- Purpose/Benefit of Participating in the Collaborative
- Implementation Team- Lived Experience
- Introduction to implementing Zero Suicide & Developing a Work Plan using the Self-Assessment
- Communicating with staff about your Zero Suicide Initiative
- Workforce Survey- Andrea Hood
- Technical Assistance- Andrea Hood
Utah and U.S. Suicide Trend

Rate of Suicides per 100,000 Population Ages 10+ by Year, Utah and U.S., 1999-2015

Data Source: Utah Death Certificate Database, U.S. Centers for Disease Control and Prevention
Utah Ranks 5th in the Nation

Data Source: WISQARS 2014 Suicide Fatality Rates ages 10+
Suicide Rate by Age Group and Sex  Utah, 2013-2015

Data Source: Utah Death Certificate Database, Utah Department of Health
Utah Suicide Prevention Plan

Utah Suicide Prevention Plan 2017-2021

- Increase availability and access to quality physical and behavioral health care
- Increase social norms supportive of help-seeking and recovery
- Reduce access to lethal means
- Increase connectedness to individuals, family, community and social institutions by creating safe and supportive school and community environments
- Increase safe media portrayals of suicide and adoption of safe messaging principles
- Increase coping and problem solving skills
- Increase support to survivors of suicide loss
- Increase prevention and early intervention for mental health problems, suicide ideation and behaviors and substance misuse
- Increase comprehensive data collection and analysis regarding risk and protective factors for suicide to guide prevention efforts

Level of SEM:
- Societal
- Community
- Interpersonal
- Individual
People At Risk For Suicide Are Falling Through the Cracks in Our Health Care System

In the month before their death by suicide:
- Half saw a general practitioner
- 30% saw a mental health professional

In the 60 days before their death by suicide:
- 10% were seen in an emergency department
“Suicide represents a worst case failure in mental health care. We must work to make it a ‘never event’ in our programs and systems of care.”

Dr. Mike Hogan
NY Office of Mental Health
Suicide Care in Behavioral Health Care Settings

- Suicide prevention is a core responsibility for behavioral health care systems.

- Many licensed clinicians are not prepared:
  - 39% report they don’t have the skills to engage and assist those at risk for suicide.
  - 44% report they don’t have the training.
  - In Utah, 61% of providers surveyed reporting not having the skills to engage those at risk and 58% report they don’t have the training.
“Over the decades, individual (mental health) clinicians have made heroic efforts to save lives... but systems of care have done very little.”

Dr. Richard McKeon
SAMHSA
What is Zero Suicide?

- A priority of the Utah Suicide Prevention Coalition
- A priority of the Utah Division of Substance Abuse and Mental Health
- A priority of the National Action Alliance for Suicide Prevention
- A goal of the National Strategy for Suicide Prevention
- A project of the Suicide Prevention Resource Center
- A framework for systematic, clinical suicide prevention in behavioral health and health care systems
- A focus on safety and error reduction in healthcare
- A set of best practices and tools for health systems and providers
“It is critically important to design for zero even when it may not be theoretically possible...It’s about purposefully aiming for a higher level of performance.”

Thomas Priselac
President and CEO of Cedars-Sinai Medical Center
Suicide Care in System Framework

Better Approaches to Suicide Care Are Available, Effective, and Fill The Cracks in Our Health Care System
Create a leadership-driven, safety oriented culture

Suicide Care Management Plan
- Identify and assess risk
- Use effective, evidence-based care
- Provide continuous contact and support

Electronic health record

Develop a competent, confident, and caring workforce

CONTINUOUS

APPROACH

QUALITY

IMPROVEMENT
LEADERSHIP

Make an explicit commitment to reduce suicide deaths.

System change occurs with sustained and committed leaders who learn and improve practices following adverse events.

(1) utilizing lessons learned from high-reliability organizations,
(2) fostering a just culture,
(3) maintaining focus on a comprehensive approach to preventing suicide deaths in their systems, and
(4) focusing on continuous quality improvement and fidelity to the Zero Suicide model.
Train

Develop a competent, confident, caring workforce.

Train all staff—clinical and non-clinical—to identify individuals at risk and respond effectively, commensurate with their roles.

Assess employees beliefs, training and skills

Develop a training play for all employees which should include at a minimum:
* Screening and Identification
* Internal policies and procedures
* Assessing, safety planning, continuity of care, referrals, and treatment for clinical staff
IDENTIFY

Identify every person at risk for suicide.

Screen and assess every new and existing patient for suicidal thoughts and behaviors in an ongoing and systematic way using standardized tools.

Evidence-based screening and assessment tools should be incorporated into clinical practice as the use of such tools coupled with clinical judgment has been found to be more accurate than clinician judgment alone.

Developing policies and procedures around identification of risk that leverage evidence-based tools is a crucial step toward safer suicide care.

Commonly used tools include the PHQ-9 and the Columbia Suicide Severity Rating Scale coupled with narrative risk assessments.
**ENGAGE**

Engage clients in a Suicide Care Management Plan.

Patients at risk for suicide agree to actively engage in a package of evidence-based practices that directly targets their suicidal thoughts and behaviors.

Suicide Care Management Plans may include:

- Ongoing screening using evidence-based tools
- Same-day access to behavioral health professionals for those determined to be at immediate risk through use of a standard risk formulation framework
- Requirements and protocols for safety planning, crisis support planning, and lethal means reduction, including the frequency of visits and actions to be taken if a patient misses appointments or drops out of care
- Channels for communicating with a patient about diagnosis, treatment expectations, and what it means to have a suicide care management plan
- A referral process to suicide-specific, evidence-based treatment and requirements for continued contact, especially during transitions in care
- Criteria and protocols for closing out a patient’s suicide care management plan
- Training for all staff at least annually in suicide care management plan policies and protocols and documentation requirements
- A schedule for regular team meetings and clinical case consultations to discuss patients at risk for suicide
- A schedule for management to regularly review charts to determine that policies and protocols are followed
TREAT

Treat Suicidal Thoughts and Behaviors Directly.

Utilize evidence-based treatments that focus explicitly on reducing suicide risk to keep patients safe and help them thrive.

Recent research strongly supports targeting and treating suicidal ideation and behaviors specifically and directly in the least restrictive environment.

Effective, Evidence-Based Care:
- CBT-SP
- DBT
- CAMS
- Safety Planning/Crisis Response Planning
- Lethal Means Restriction
TRANSITION

Follow patients through every transition in care.

Put policies into action that ensure safe hand-offs between caregivers and upon discharge

Organizational policies provide guidance for successful care transitions and specify the contacts and support needed throughout the process to manage any care transition

- Follow-up and supportive contacts for individuals on a suicide care management plan, also called a pathway to care, are tracked and managed using an electronic health record or paper record

- Patients are engaged in an individualized, culturally sensitive manner that takes into account their needs and preferences

- Staff are trained how to provide supportive caring contacts and follow-up care using techniques such as motivational interviewing, safety planning, and lethal means assessment and counseling
IMPROVE

Apply data-driven quality improvement.

Use data to inform system changes that will lead to improved patient outcomes and better care for those at risk.

1) identify patient care outcomes demonstrating whether systems and policy changes are impacting practice;

1) assess care outcomes for all patients who have a suicide care management plan;

1) develop, review, and improve data collection on suicide attempts and deaths among those in care; and

1) assess the experience and satisfaction of patients who are or have been engaged in a suicide care management plan.

Involving those with lived experience

Suicide prevention and behavioral health care organizations can engage, hire, and/or collaborate with peer support professionals. They should also include attempt survivors as key partners in suicide prevention efforts.

Providers of crisis or emergency services can develop formal partnerships with organizations that offer peer support services and especially organizations that are operated or driven by people with lived experience.

Suicide prevention and behavioral health groups can engage attempt survivors as partners in developing, implementing, and evaluating efforts.

All types of providers can use a certified peer specialist on care coordination teams. This involvement can have direct benefits for a person receiving care, including role modeling and improved problem-solving.

The Most Important Truth About Suicide Is The One You’ve Never Heard

We are living among people who have faced the worst of personal pain and doubt and have come through them to better lives.

The Way Forward: Pathways to hope, recovery, and wellness with insights from lived experience

EMPOWER - Gain priority in DSAMH-sponsored training opportunities and other resources
Purpose of the Collaborative

GET MOTIVATED,
STAY MOTIVATED
Leading Zero Suicide Efforts
Getting Buy In From the Top Down

Create **urgency** that preventable deaths by suicide are unacceptable from moral, legal, and business viewpoints.

Use data and stories to show that suicide is preventable.

Like Martin Luther King Jr and civil rights activists, have both a **dream** and a **plan**.

A quality improvement approach is both necessary and available.
When is the buy in and urgency high enough?

When 75% of a company’s management is honestly convinced that business-as-usual is totally unacceptable.

Deaths by Suicide are Unacceptable

• Suicide Risk as a Vital Sign: Mike Hogan
  Suicide Screening vs. Cholesterol Screening and Heart Disease

• Standards of Care- Skip Simpson
  Suicide is foreseeable; prediction is not the standard of care.” Foreseeable” means to anticipate something bad is going to happen if proper intervention is not taken to prevent that “bad thing.” Proper suicide screening and then a systematic suicide assessment will tell us who is at risk for an attempted suicide in the near term—hours, days, or weeks.

• Institute Of Medicine Report:
  Reducing Suicide: A National Imperative: “Knowing is not enough; we must apply. Willing is not enough; we must do.”
Suicide is Preventable

Most people who think about suicide or attempt suicide, do NOT go on to die by suicide.

People with suicidal thoughts are often deeply ambivalent. Part of them is uncertain, connected to life, or hopeful for a better future.

People with suicidal thoughts do not actually want to die. They want to end overwhelming pain or find a solution to an overwhelming problem.
Suicide is Preventable

Suicide crises are often brief. If we keep the person safe and support them through the crisis, they are likely to survive.

There are effective treatments and brief interventions for reducing suicidality, that can empower a person to manage suicidal thoughts, reduce their distress, and live a long and meaningful life.

Henry Ford Health System created an 80% reduction in suicide deaths by implementing the strategies captured in the Zero Suicide Framework.
Suicide is Preventable

Effective ZS Leadership

One of the most common errors made in Transformation Efforts is Undercommunicating the Vision by a Factor of Ten.

Use all existing communication channels to broadcast the vision.

Incorporate the vision into hour by hour activities such as routine problem solving meetings, performance appraisals, documentation, etc.

Executives learn to “walk the talk” and become a living symbol of the new culture.

John P. Kotter
“Leading Change: Why Transformation Efforts Fail”
Effective ZS Leadership

• “Baked In” to every level of organizational culture - reflected as a priority in budgets, staff meetings, training, documentation, etc.
• Must include written policy change WITH monitoring and support from mid-level management to carry out those policies
• Use stories and data to motivate and track success
Effective ZS Leadership

How do we have a culture of Zero Suicides and believe that suicide is truly preventable without staff feeling blamed when a client does take their life?

- Leadership honesty and transparency
- Support for the clinician as a loss survivor
- Embed ZS in a “Just Culture” where accountability is shared and system improvement is promoted over individual punishment
Zero Suicide Organizational Self-Study

Adapted from James Reason’s “Swiss Cheese” Model Of Accidents

In your work plan, plan for short term wins that are fairly easy to attain and will increase momentum and excitement for Zero Suicide.

Connect these changes to stories and evidence of lives saved and improved.
WHAT IS ZERO SUICIDE?

Zero Suicide is a commitment to suicide prevention in health and behavioral health care systems, and also a specific set of tools and strategies. It is both a concept and a practice.

Its core propositions are that suicide deaths for people under care are preventable, and that the bold goal of zero suicides among persons receiving care is an aspirational challenge that health systems should accept. The Zero Suicide approach aims to improve care and outcomes for individuals at risk of suicide in health care systems. It represents a commitment to patient safety—the most fundamental responsibility of health care—and also to the safety and support of clinical staff, who do the demanding work of treating and supporting suicidal patients.

The challenge of Zero Suicide is not one to be borne solely by those providing clinical care. Zero Suicide relies on a system-wide approach to improve outcomes and close gaps rather than on the heroic efforts of individual practitioners. This initiative in health care systems also requires the engagement of the broader community, especially suicide attempt survivors, family members, policymakers, and researchers. Thus, Zero Suicide is a call to relentlessly pursue a reduction in suicide for those who come to us for care.

The programmatic approach of Zero Suicide is based on the realization that suicidal individuals often fall through multiple cracks in a fragmented and sometimes distracted
1. **LEAD** » Create a leadership-driven, safety-oriented culture committed to dramatically reducing suicide among people under care. Include suicide attempt and loss survivors in leadership and planning roles.

2. **TRAIN** » Develop a competent, confident, and caring workforce.

3. **IDENTIFY** » Systematically identify and assess suicide risk among people receiving care.

4. **ENGAGE** » Ensure every person has a suicide care management plan, or pathway to care, that is both timely and adequate to meet his or her needs. Include collaborative safety planning and restriction of lethal means.

5. **TREAT** » Use effective, evidence-based treatments that directly target suicidality.

6. **TRANSITION** » Provide continuous contact and support, especially after acute care.

7. **IMPROVE** » Apply a data-driven quality improvement approach to inform system changes that will lead to improved patient outcomes and better care for those at risk.

ZS Implementation Team

• Meets regularly to formulate, implement, and evaluate the work plan.
• Representation from different departments and levels of the organizational hierarchy.
• Authority for changing policies and procedures—must include several members with power to make changes.
• Determine a role and goals in the work plan for all levels of staff.
• Responsible for measuring progress as well as suicide deaths within the agency and reporting outcomes back to agency at large.
• Helpful to have one point person on the team to be the face of the effort
ZS Implementation Team

• Includes those with lived experience and the suicide bereaved
  • Include people with lived experience in developing, implementing, and evaluating efforts
  • Include peer supports professionals on care coordination teams
• Taryn Hiatt from American Foundation for Suicide Prevention
2012 DSAMH Workforce Survey

I have received the TRAINING I need to engage and assist those with suicidal desire and/or intent:
   36.6% Completely Agree or Agree
   63.4% Completely Disagree, Disagree or Don’t Know

I have the SKILLS I need to engage those with suicidal desire and/or intent:
   38.1% Completely Agree or Agree
   61.8% Completely Disagree, Disagree or Don’t Know

I have the SUPPORT/SUPERVISION I need to engage and assist those with suicidal desire and/or intent:
   47.7% Completely Agree or Agree
   52.3% Completely Disagree, Disagree or Don’t Know
Workforce Survey

DSAMH has already built out and paid for your staff to complete the new version of the survey in Qualtrics, just ask me for a link designated to your agency a few weeks before you would like to administer the survey. See the questions here

We will get the anonymous results back to you for your agency.

You can re-administer the survey and compare results in one to two years.
Technical Assistance & Training

Kim Myers and Andrea Hood available to provide one-on-one technical assistance and connect you to a national network of experts.

Gatekeeper training (non-clinical introduction to suicide prevention) is available throughout the state for low or sometimes no cost.

For information regarding clinical training opportunities and recommendations, see the handout.

Staff training should be recurring, built into comprehensive suicide prevention policy, and supported by supervision and consultation.
